

MVP Export Demo

Venture Copilot

Generated date: 2026-05-19

1 Executive Summary

MVP Export Demo is a finance-first startup plan for: A complete startup package export test for university founders The current 36-month forecast projects total revenue of 297,826.91 and ending cash of 154,218.07.

Idea summary: A complete startup package export test for university founders

Solution: MVP Export Demo should launch as a narrow MVP that proves the core user workflow, collects feedback quickly, and avoids unnecessary product scope.

2 Market Research

Market size: Early market sizing should focus on the reachable student and university ecosystem first, then expand to adjacent graduate, early-career, and campus partner segments once retention is proven.

Industry trends: Universities continue to support student entrepreneurship through accelerators and enterprise programs.; Student-facing products are expected to prove value quickly because budgets and attention are constrained.; Lightweight digital services can validate demand through pilots before heavy operational investment.

Competitors: Manual spreadsheets and generic planning templates; University incubator advisory sessions; Generic business planning software; Early-stage startup finance tools

Market: The initial market should be defined around reachable university communities, student groups, and early adopters who can be interviewed and converted directly.

3 Financial Forecast

Breakeven month: 10

Funding needed: 0.0

Forecast summary: total_revenue: 297826.91; total_net_profit: 136218.07; ending_cash: 154218.07; breakeven_month: 10; funding_needed: 0.0

4 Risks

Key risks are weak demand validation, slow student adoption, underestimated support work, and cost assumptions drifting from the forecast.

Research risks: Market size assumptions may be too broad before direct customer interviews are complete.; Students may prefer free alternatives unless the product saves clear time or money.;

University sales cycles can be slow if the team targets institutions too early.

5 Roadmap

Roadmap: validate the problem, build the smallest useful MVP, run a pilot, measure willingness to pay, then expand only around proven usage.
